The Trait of the Month is: **Perseverance**

*Our greatest glory is not in never falling, but
in rising every time we fall. --Confucius*

Perseverance – Adhering to a course of action, a belief, or a purpose, especially in spite of difficulties, obstacles, or discouragement.

When we persevere, we:

- Do our best with what we have.
- Keep trying; we don't quit or give up easily.
- Never make excuses for obstacles that get in the way of getting something done. Instead we look for ways to remove or work around the obstacles.

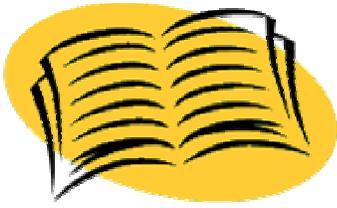

There is a poem on the GreatTraits.com website entitled *The Race*. This poem exemplifies perseverance. The last few lines of the poem read:

*For all of life is like a race, with ups and downs and all.
And all you have to do to win is rise each time you fall.
"Quit!" "Give up, you're beaten!" They still shout in my face.
But another voice within me says, "GET UP AND WIN THE RACE!"*

This month, spend some time with your child explaining the importance of "staying the course" and doing the best you can. And, read *The Race* together. You will be glad you did.

To Do List

1. Go over the **Perseverance Poster** together and put it on the refrigerator.
2. Read the attached **Story** with your child and discuss the **Questions** at the end.
3. Do at least one **Additional Activity** to reinforce the perseverance character trait.
4. Write a short comment on the **Puzzle Piece** about what your child has learned about perseverance, cut out the puzzle piece, and have your child return it to school.

Perseverance

A Collection of True Stories

Master of Invention

Do you know why the lights come on when you flick the switch?

Thomas Edison could've told you. He invented the light bulb more than 130 years ago. Edison also thought of nearly 1,100 other things that improved the world, including a power generator to make electricity, a record player to record and play back words and music, and a movie camera to film moving pictures.

But as a boy in the 1850s in Port Huron, Michigan, his school teachers didn't think Edison was smart. While other students participated in class and quickly learned to read and write, Edison struggled with his studies. He wasn't good at sports, and other kids called him names. Sometimes he got so frustrated he didn't go to school.

Edison didn't hear as well as the other kids, so he couldn't understand everything the teacher said. Finally, when he was 10, his mother pulled him out of school and gave him books to read. She had been a schoolteacher and knew how to make learning fun for her son.

Chemistry and science were Edison's favorite subjects. His mother helped him set up a laboratory in his room, but quickly had him move it to the basement because he spilled chemicals and ruined the floor and furniture.

Edison enjoyed experimenting and improving other inventions. Because he wasn't a fast learner early on in life, he realized the importance of never giving up. And it's a good thing, since it took him more than 1,500 tries to make the light bulb work perfectly.

Science Guy

Albert Einstein is one of the greatest scientists of all time. But Einstein wasn't always wowing people with his deep thoughts. When he was your age, Albert was no "Einstein."

While many children learn to say words by the time they are 1, he didn't talk until he was 3 years old. Even as he grew, he had trouble putting thoughts into words. At 9, he rarely spoke or talked very slowly. His dad thought he was stupid, and the elementary school principal told his family it didn't matter what Einstein studied because he'd never be successful at anything.

He had a lot of trouble memorizing facts. Math interested him, because he had to figure out the answer instead of trying to remember the correct fact.

While he disliked school as a child, Einstein enjoyed playing the violin and building things. He loved to put together puzzles and create houses out of blocks and cards. Sometimes his card houses would be 14 stories high!

Perseverance (continued)

When Einstein grew a little, his uncle Jakob started teaching him about difficult math problems at home. Einstein quickly learned the concepts and started solving problems that only much older kids were able to do.

By the time Einstein went to college at 17, he was a math and science whiz. He even got an article published in a German science magazine when he was 21.

Twenty-one years later, in 1921, Einstein won the Nobel Prize in physics, as the best scientist in the world.

Rise to the White House

Woodrow Wilson ran the most powerful country in the world for eight years. He was president of the United States during World War I and helped the Europeans defeat Germany. Not bad for a kid who didn't know the alphabet until he was 9 years old and couldn't read until he was eleven.

Born in 1856 in Virginia, Wilson grew up listening to good books. His father was a Presbyterian minister and everyday his family would gather to pray, sing and read. Although Wilson couldn't read, his dad made sure he could speak well. He took Woodrow to see new inventions or read chapters from books. Then the two of them would talk about the ideas.

Wilson hoped to follow in his father's footsteps as a minister, but he got sick a lot at college and had to drop out.

By the time he returned to college at Princeton University in New Jersey, Wilson decided to study politics. He graduated from Princeton then entered law school.

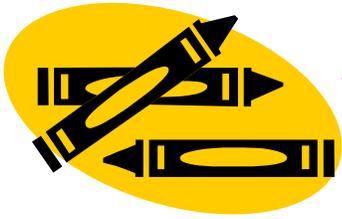

Wilson's plan to serve people in government was put on hold when he became a college professor. He taught college for 17 years and even became the president of Princeton in 1902.

Eight years later Wilson was elected governor of New Jersey, and two years after that he became the 28th president of the United States.

He will always be remembered for his direct, honest and smooth way of speaking—even if he wasn't very good at his ABCs.

Story Questions

1. Which man from history – Edison, Einstein, or Wilson – demonstrated the most perseverance in your opinion, and why?
2. Being good at something takes a lot of work. What can you do really well? How did perseverance help you learn this?
3. Have your parents tell a story about something where they had to use perseverance in order to succeed.

Additional Activities

1. Introduce your child to a new life skill that takes a lot of practice to master, such as sewing on a button, ironing a shirt (with a warm iron) or baking cookies. Encourage them to keep practicing and praise their progress.
2. With your child, try a new sport or hobby such as bowling, flying a kite, or playing solitaire. Emphasize to your child that it is normal to face challenges when you first begin something, and that it is important to have **perseverance** in order to improve and succeed.
3. Create words from P E R S E V E R A N C E by filling in the missing letter.

A _ _

_ _ E E

P E _ _ A N

A _ _

C _ _ P

S E _ _ V E

_ _ E A

V _ _ R S E

_ _ A N
